This is very simple, here we can use this `@RepeatedTest(3)` annotation to repeat a particular test, and the number inside the bracket is if how many time we repeat the test. So here we repeat it three times.

An example will look like this,

```
@RepeatedTest(3)
void testComputeCicleArea() {
    assertEquals(314.1592.., mathUtils.computeCircleArea(10), "Should
repeat the test 3 times");
}
```

And we can do different stuff depending on what repetition we are in too,

```
@RepeatedTest(3)
void testComputeCicleArea(RepetitionInfo repetitionInfo) {
    repetitionInfo.getCurrentRepetition();
    assertEquals(314.1592.., mathUtils.computeCircleArea(10), "Should
repeat the test 3 times");
}
```
